EDUCATION

Istinye University, Istanbul

June 2026

B.Sc. in Software Engineering cGPA: **3.95 / 4.00**

Minor in Electrical & Electronics Engineering cGPA: **3.88 / 4.00**

TECHNICAL SKILLS

Languages: C, C++, Python, SQL, Go, Rust, PHP, JavaScript

Web & Frameworks: HTML/CSS, Laravel, Flask, React, Express

Tools & Technologies: Git, Linux (Arch), Vim, REST APIs, Machine Learning, Docker, AWS, GitHub Actions

Other: Game Development (Unity)

PROJECTS

Attendify: Intelligent Anti-Cheat Attendance System <https://attendifyimiz.netlify.app/> ★ Graduation Project

- Designed and built a graduation capstone project that eliminates proxy attendance via triple-layer verification: cryptographic dynamic QR codes (auto-expiring tokens), GPS geofencing using the Haversine formula, and AI facial recognition.
- Developed a Python FastAPI biometric service using DeepFace (FaceNet512) producing 512-dim face embeddings; stored and queried via PostgreSQL + pgvector with HNSW indexing for sub-50ms cosine similarity matching.
- Built a high-performance Go (Gin-Gonic) API gateway orchestrating the full verification pipeline across microservices.
- Delivered a React + TypeScript web dashboard for instructors and a React Native (Expo) cross-platform mobile app for students.

Housing Price Classification: MLOps Pipeline github.com/ibrahemassa/housing-price-classification

- Architected an end-to-end Level 2 MLOps pipeline automating continuous training, monitoring, and deployment of a housing price classification model.
- Orchestrated ML workflows with Prefect; managed experiment tracking, metadata, and model registry with MLflow.
- Deployed a real-time inference API via FastAPI and built a monitoring dashboard in Streamlit to track model metrics.
- Containerized microservices (API, training pipelines, dashboard, MLflow server) using Docker & Docker Compose; established CI/CD with Pytest and GitHub Actions.

LeetTracker: Full-Stack Progress Tracker github.com/ibrahemassa/leet-tracker

- Built a full-stack web app to track, visualize, and analyze LeetCode problem-solving progress using a modern MVC/microservices hybrid architecture.
- Built with Laravel (PHP), Python, Go, and React; features dashboard, problem management, solution viewer with syntax highlighting, real-time statistics, tag/difficulty filtering, and user authentication.

Backend Language Selector: MCDM Decision Support System ibrahim-mcdm.netlify.app/

- Built a decision support system selecting the optimal backend language using a hybrid MCDM method (FFS-PSI-AROMAN) incorporating expert feedback.
- Implemented Fermatean fuzzy logic, PSI weighting, and AROMAN ranking to evaluate PHP, Python, Java, JavaScript, Go, and Rust.
- Full web interface with React frontend and Flask backend.

Machine Learning: Preferred Study Environments Predictor

- Analyzed survey data from 155 students to predict ideal study setups; applied feature selection and SMOTE for class balance.
- Trained and compared Random Forest, Gradient Boosting, ANN, and stacking ensemble models, achieving up to ~90% accuracy.
- Integrated model into a web app to deliver personalized study environment recommendations.

Video Summarizer github.com/ibrahemassa/video-summarizer

- Developed a tool that extracts audio from YouTube videos, transcribes it, and summarizes content using local LLMs (e.g., DeepSeek).

StockDolphin: Chess Engine github.com/ibrahemassa/StockDolphin

- ▶ Designed a basic chess engine in Python capable of generating and evaluating moves using a static evaluation function.

E X P E R I E N C E

ISU XR Lab: Istinye University

2025 – 2026

Research Intern · Istanbul, Türkiye

- ▶ Contributed to an early-stage pediatric cardiovascular anomaly detection research project, assisting with data processing and structural analysis pipelines for patient-specific models.
- ▶ Supported the development of medical imaging workflows, with contributions leading to 3 published scientific papers.

SCRAMBLEBIT

Sep 2024 – Nov 2024

Backend Intern · Istanbul, Türkiye (On-site)

- ▶ Developed and maintained backend web features using PHP and Laravel in a production environment.
- ▶ Gained hands-on experience with back-end architecture, API development, and collaborative team workflows.
